KEYWORDS	ABSTRACT
Education system, Covid-19 outbreak, School Education in Chhattisgarh, Impact of Online education method.	Education is an important part of life. Education is a Sanskrit word which means to learn or teach. We can get education through any medium. Education prepares man intellectually. Similarly, in today's modern era, a simple way to get education is online education. In modern times, the online education system is like a boon. Those who have not received education for some reason can get new dimensions from the online education system. Due to the outbreak of Covid-19, schools and colleges and all other types of educational institutions were closed. At the time of the Covid-19 outbreak, the level of education had fallen all over the world. India is no exception to this situation. When schools were closed, new avenues were discovered for education, in which efforts were made to further the development of education by adopting online methods. In the online teaching system, there was good on one side and evil on the other. Through this research paper, the research scholar has to study the impact of online teaching method on school education in the special context of Chhattisgarh.

Introduction

In the changing environment, technology has changed over time. Due to technology, human beings have developed in every field. With the help of technology, there has been an incomparable development in the educational system. A good example of this was seen during Kovid-19 when schools and colleges were closed and all people were stopped from leaving the house. Despite the lockdown, schools and colleges started teaching online by working from home. At present, even though the Covid era has stopped, the online method is still being used in teaching work. In the online teaching method, student related material can be sent from one place to another through technology. Online teaching method saves time as well as money. Students can take education from the comfort of their home. Children are constantly connected with their teachers through online medium. After studying in the offline class, students do not have any other means other than writing the necessary facts, but through online, teachers teach students in new ways, so that students are also interested in reading. Special projects are run by the Chhattisgarh government and the central government in which study material, video, audio etc. are delivered to school children through WhatsApp and other online platforms. This new initiative has made the education system easier rather than interrupted.
